

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Claim 1 (currently amended): A system for sizing a tile on a computer display, the system comprising:

an automatic sizing routine for automatically sizing the tile responsive to a change in tile content during an automatic mode;

a manual sizing routine which allows a user to manually set the size of the tile during a manual mode; and

wherein the tile is operated in the automatic mode until the user manually sets the size of the tile; and

wherein ~~when~~ after the user manually sets the size of the tile ~~[[a]]~~ the manual mode is entered during which further automatic sizing of the tile responsive to a change in tile content is restricted; ~~and~~

~~wherein the automatic sizing routine is executed responsive to a change in tile content.~~

Claim 2 (original): The system of Claim 1, wherein the tile is provided in a sidebar area.

Claim 3 (original): The system of Claim 1, wherein once the manual mode is entered, the user may make a selection to return the tile to the automatic mode.

Claim 4 (original): The system of Claim 1, wherein a maximum size is set for the tile and in the manual mode a user is prevented from resizing the tile beyond the maximum size.

Claim 5 (original): The system of Claim 4, wherein the maximum size for the tile may be set by the tile.

Claim 6 (original): The system of Claim 1, wherein a maximum size is specified for a tile, and in order to automatically size the tile beyond the maximum size, approval must be obtained from the user.

Claim 7 (original): The system of Claim 6, wherein the tile is located in a sidebar and the maximum size for the tile may be set by the sidebar.

Claim 8 (currently amended): A computer-readable medium having computer-executable components for sizing a tile, the computer-readable medium comprising:

an automatic sizing component for automatically sizing the tile responsive to a change in tile content during an automatic mode;

a manual sizing component for allowing a user to manually size the tile during a manual mode, wherein the tile is operated in the automatic mode until the manual sizing component is used, said use of the manual sizing component places the tile in ~~[[a]]~~ the manual mode; and

wherein when the tile is in the manual mode, the tile is restricted from being automatically resized, ~~and~~

~~wherein the automatic sizing component is configured to resize the tile responsive to a change in tile content.~~

Claim 9 (original): The computer-readable medium of Claim 8, wherein a maximum size is specified for the tile and limitations are placed on sizing the tile above the maximum size.

Claim 10 (original): The computer-readable medium of Claim 9, wherein in order to size the tile above the maximum size, approval must be obtained from the user.

Claim 11 (original): The computer-readable medium of Claim 10, wherein the approval is obtained from the user through a notification that is provided to the user.

Claim 12 (original): The computer-readable medium of Claim 8, further comprising a context menu with options that are provided for the tile.

Claim 13 (original): The computer-readable medium of Claim 12, wherein at least one of the context menu options is for autosizing the tile.

Claim 14 (original): The computer-readable medium of Claim 12, wherein context menu options include one or more of move up, move down, or delete tile.

Claim 15 (currently amended): A system for resizing a tile on a display, the system comprising:

- a computer device having a processor and a memory;
- a display device communicatively coupled to the computing device for displaying a tile;

- a first routine for automatically resizing the tile responsive to a change in tile content during an automatic mode, wherein user approval is required to resize the tile above a predefined maximum size; and

- a second routine for allowing a user to manually resize the tile during a manual mode,

- wherein the tile is operated in the automatic mode until the user manually sets the size of the tile or the user declines a request to automatically resize the tile above the predefined maximum size; and

- wherein after the user manually sets the size of the tile or the user declines a request to automatically resize the tile above the predefined maximum size the manual mode is entered during which further automatic sizing of the tile responsive to a change in tile content is restricted.

- ~~wherein the routine for automatically resizing the tile is executed by the computing device responsive to a change in tile content.~~

Claim 16 (original): The system of Claim 15, further comprising a sidebar area on the display device in which the tile is located and in which a plurality of additional tiles may be provided.

Claim 17 (canceled).

Claim 18 (canceled).

Claim 19 (original): The system of Claim 15, further comprising a context menu that is provided with options for the tile.

Claim 20 (currently amended): In a computer system, a method for sizing a tile, the method comprising:

initially setting the tile in an automatic mode;

automatically sizing the tile responsive to a change in tile content during the automatic mode;

allowing a user to manually set the size of the tile;

~~setting~~ resetting the tile from the automatic mode to [[in]] a manual mode when the user manually sets the size of the tile; and

wherein while the tile is in the manual mode, preventing the tile from being automatically resized, ~~and~~

~~wherein the tile is automatically sized responsive to a change in tile content.~~

Claim 21 (original): The method of Claim 20, wherein a sidebar area is provided for the tile and a plurality of additional tiles, and the available space in the sidebar is a factor in the automatic sizing of the tile.

Claim 22 (original): The method of Claim 21, wherein an additional factor in the automatic sizing of the tile is the amount of space that the tile requires for displaying its content.

Claim 23 (original): The method of Claim 20, wherein a maximum size is set for the tile.

Claim 24 (original): The method of Claim 23, wherein in order to automatically size the tile above the maximum size, approval must be obtained from the user.

Claim 25 (original): The method of Claim 24, wherein the approval is obtained from the user through a notification that asks the user whether or not the tile should be allowed to be automatically resized to the new size.

Claim 26 (original): The method of Claim 25, wherein once the user approves the new size, additional resizing may be performed without further approval, and if the new size is not approved, the tile is placed in a mode which restricts further automatic resizing.

Claim 27 (currently amended): In a computer system with a display, a method for sizing a tile on the display, the method comprising:

providing the tile on the display, said tile displaying first content; and
automatically resizing the tile a plurality of times based at least in part on changes in the first content ~~that is to be displayed in the tile~~,

wherein the automatic resizing of the tile is permitted when a time differential between a first resizing event and a second resizing event is greater than a predetermined time interval, and wherein the tile is prevented from being automatically resized otherwise; and

providing the resized tile on the display, said resized tile displaying second content.

Claim 28 (original): The method of Claim 27, wherein a sidebar area is provided on the display in which the tile and a plurality of additional tiles are located.

Claim 29 (original): The method of Claim 27, wherein a user is able to manually resize a tile.

Claim 30 (original): The method of Claim 29, wherein when a user manually resizes a tile a manual mode is entered, and wherein during the manual mode the tile may not be automatically resized.

Claim 31 (original): The method of Claim 27, wherein a maximum size is specified for a tile.

Claim 32 (original): The method of Claim 31, wherein in order to automatically resize a tile over the maximum size, approval must be obtained from the user.

Claim 33 (currently amended): A computer-readable medium having a computer-executable components for sizing a tile, the computer-readable medium comprising:

a tile component for providing the tile on a display, said tile displaying first content; and

an automatic resizing component for automatically resizing the tile a plurality of times,

wherein the automatic resizing component is configured to permit resizing when a time differential between a first resizing event and a second resizing event is greater than a predetermined time interval, and wherein the tile is prevented from being automatically resized otherwise, and

wherein the tile component is configured to provide the resized tile on the display, said resized tile displaying second content.

Claim 34 (original): The computer-readable medium of Claim 33, further comprising a context menu component for providing a context menu with options for a tile.

Claim 35 (original): The computer-readable medium of Claim 34, wherein the context menu options include an option for automatically resizing the tile.

Claim 36 (original): The computer-readable medium of Claim 35, wherein additional context menu options include options for one or more of moving the tile up or down or deleting the tile.

Claim 37 (original): The computer-readable medium of Claim 33, wherein a maximum size is specified for a tile, and in order to automatically resize the file above the maximum size, approval must be obtained from the user.

Claim 38 (currently amended): The computer-readable medium of Claim 33, wherein the automatic resizing of the tile is in some instances based at least in part on changes to the first content ~~that is to be displayed in the tile~~.

Claim 39 (previously presented): The computer-readable medium of Claim 33, wherein the automatic resizing component is executed responsive to an application program being opened.

Claim 40 (original): The computer-readable medium of Claim 39, wherein the minimum time interval is used to prevent the tile from being automatically resized smaller, but the tile is allowed to be automatically resized larger, regardless of whether the minimum time interval has been reached.

Claim 41 (currently amended): A system for resizing a tile on a computer display, the system comprising:

- a computing device having a processor and a memory;
- a display device communicatively coupled to the computing device for displaying a plurality of tiles;
- a first routine for providing the tile on the display, said tile displaying first content; ~~and~~
- a second routine for automatically resizing the tile a plurality of times,
- wherein the automatic resizing of the tile is permitted when a time differential between a first resizing event and a second resizing event is greater than a predetermined

time interval, and wherein the tile is prevented from being automatically resized otherwise; and

a third routine for providing the resized tile on the display, said resized tile displaying second content.

Claim 42 (original): The system of Claim 41, further comprising a manual resizing routine which allows a user to manually resize the tile, wherein when a user manually resizes a tile a manual sizing mode is entered, wherein during the manual sizing mode the tile may not be automatically resized.

Claim 43 (original): The system of Claim 41, wherein the tile is located in a sidebar and a maximum size is specified for the tile by the sidebar, and the tile may only be automatically resized above the maximum size if approval is obtained from the user.

Claim 44 (original): The system of Claim 43, wherein if the user does not provide approval for resizing the tile above the maximum size, then the tile enters a manual sizing mode.

Claim 45 (original): The system of Claim 43, wherein if the user approves the new size for the tile that is above the maximum size, then further automatic resizing of the tile may be done without requiring further approval from the user.

Claim 46 (original): The system of Claim 41, wherein a tile may specify a maximum size for itself which may not be overridden by a user.
